

BTF/PRF: Absolute and incremental wire draw encoders for measuring lengths up to 50 m.

The combination of the wire draw mechanism and absolute or incremental encoders manufactured by SICK-STEGMANN enables made-to-measure solutions for almost any application profile.

To comply with the exacting demands of automation technology, these wire draw encoders offer the correct interface for every application:

- SSI, Profibus, CANopen or DeviceNet field bus technology for absolute encoders
- HTL or TTL interfaces for incremental encoders.

For example, this product can be utilized in many applications including:

- Crane, drilling and excavator systems
- Presses, punching and injection machines
- Weir systems and locks
- High-bay shelving and theatre stages
- Woodworking and stone processing machines
- Machinery construction, medical technology and many other industries.

Wire draw encoders consist of wire draw mechanism and an encoder.

The rotation of the drum is proportional to the length being measured. This movement is counted by an encoder and converted to a measuring signal. This provides high-resolution position or distance information for linear measurement paths, even under difficult ambient conditions.

Precise linear guidance, as required for other length measurement systems, is not necessary.

- Linear path measurement using a wire draw mechanism
- High resolution
- Easy to mount
- High-precision measurement drum
- Extremely stable spring return
- Highly flexible steel wire
- Dirt remover made of steel

Dimensional drawing wire draw encoder BTF 08 SSI, measuring length 2 m

1 Threaded blind hole for mounting

General tolerances to DIN ISO 2768-mk

View of the connector M23 fitted to the encoder body

PIN and wire allocation

PIN	Signal	Wire colours (cable outlet)	Explanation
1	GND	blue	Earth connection
2	Data +	white	Interface signals
3	Clock +	yellow	Interface signals
4	R x D +	grey	RS-422 programming line
5	R x D -	green	RS-422 programming line
6	T x D +	pink	RS-422 programming line
7	T x D -	black	RS-422 programming line
8	U _s	red	Supply voltage
9	SET	orange	Electronic adjustment
10	Data -	brown	Interface signals
11	Clock -	lilac	Interface signals
12	N. C.	orange/black	Not connected
	Screen		Housing potential

Caution! PINs labelled "N. C." must not be connected.

Order information

BTF Profibus adaptor

Type	Part no.	Description
AD-ATM60-KA3PR	2 029 225	Bus adaptor KA3, 3 x PG

1 PIN and wire allocation for Profibus adaptor

Terminal strip	Signal	Explanation
1	U_s (24 V)	Supply voltage 10 ... 32 V
2	0 V (GND)	Ground (0 V)
3	B	Profibus DP B line (out)
4	A	Profibus DP A line (out)
5	B	Profibus DP B line (in)
6	A	Profibus DP A line (in)
7	2P5 ¹⁾	+ 5 V (DC isolated)
8	2M ¹⁾	0 V (DC isolated)
9	RTS ²⁾	Request To Send

A Internal plug connection to the encoder
B External connection to the bus

¹⁾ Use for external bus termination or to supply the transmitter/receiver of an optical transmission link.

²⁾ Signal is optional, used to detect the direction of an optical connection.

1 Encoders with a Profibus adaptor have a terminal strip for connecting the bus and supply lines. In order to connect the lines, the Profibus adaptor is unscrewed from the complete device. The figure shows the pin allocation within the bus connection.

Switch settings

Switch settings

Access to the switches is gained by opening the removable screw cap (PG) on the rear of the bus adaptor. Use of the following elements.

S 1 (1-7)	Address setting (0 ... 127)
S 1 (8-8)	Counting direction (CW/CCW)
S 2	Bus termination
S 3	Preset push button (Number SET)

Status information via LEDs

LED-1	Operating voltage (green)
LED-2	Bus activity (red)

Implementation

DP Functionalities

in accordance with the Profibus DP basic functions

DP services

- Data interchange (Write_Read_Data)
- Address allocation (Set_Slave_Address)
- Control commands (Global_Control)
- Read the inputs (Read_Inputs)
- Read the outputs (Read_Outputs)
- Read diagnostic data (Slave_Diagnosis)
- Send configuration data (Set_Param)
- Check configuration data (Chk_Config)

Communication

- Cyclic master – slave data traffic

Protective mechanisms

- Data transfer with HD = 4
- Time monitoring of the data traffic

Configuration

Settings in accordance with Encoder Profile

- Counting direction (CW, CCW)
- Class-2 functionality (ON, OFF)
- Scaling function (ON, OFF)
- Steps per turn (1 ... 8192)
- Total resolution (GA) -- 1 ... 67,108,864 steps, with $GA = 2^n \times SpU$. -- ($n=0 \dots 13$)
- "Activation of SSA-service" ²⁾
- Selection of the station address ²⁾

Configuration

Setting the formats (IN/OUT) for the cyclic data interchange via configuration byte (K-1)

2 words IN/OUT data (I-1/O-1) ¹⁾

4 words IN/OUT data (I-1, I-2, I-3/O-1) ²⁾

Data interchange: - Input Data (IN)

I-1	Position value ¹⁾	4 bytes
I-2	Speed (rev/min) ²⁾	2 bytes
I-3	Time stamp ²⁾	2 bytes

Data interchange: - Output data (OUT)

O-1	PRESET Value ¹⁾	4 bytes
-----	----------------------------	---------

Diagnostic information

- Station-related diagnosis (63 bytes in acc. with Encoder Profile Class 2)

Setting: - PRESET value

The PRESET function is used for set into operation and to allocate a specific position value to the current physical angular position.

The following settings are possible:

- by hardware (PRESET push button: S3)
- by software: -- (see Output data)

Setting: - Counting direction

- by hardware via DIP switch S1-(8)
- by software via Telegram

Counting direction increasing:

Rotation of the shaft in the clockwise direction (CW) as viewed on the shaft

Setting: - Station address

- by hardware via DIP switch S1
- by software via Telegram

The setting by software is carried out only if the "SSA-service" has been previously activated.

Setting: - Bus termination

The 2-way DIP switch (S2) permits an internal bus termination to be switched in and out (ON/OFF).

If the bus is terminated externally, switch S2 must be in the OFF position.

Device-specific file (GS.)

For the purpose of automatic set into operation of the encoder, use is made of the GS file.

All the characteristic features of the device are defined in it.

Switch settings

Switch settings

Access to the switches is gained by opening the removable screw cap (PG) on the rear of the bus adaptor. Use of the following elements.

S 1	Address setting (Node ID)
S 2	Bus termination
S 3	Baud rate setting (Data Rate)
S 4	Preset push button (Number zero SET)

Status information via LED

LED	2-colour red/green
	CAN Controller status

Implementation

CANopen Functionality

Predefined Connection Set

- Sync Object
- Emergency Object
- NMT Network Object (Error Control services, Boot-Up service)
- One Service Data Object (SDO)
- Two Process Data Object (PDO)

I/O-Operating Modes

- Synchronic: -- Depends on Sync Object
- Asynchronous: -- No reference to Sync Object. Triggered by "Timer" (Cyclic) or by event (COS)
- Remote Transmission (RTR)

Encoder Parameters

according to the Device Profile for Encoders:

- Code direction (CW, CCW)
- Scaling function (ON, OFF)
- PRESET value
- Steps per revolution (CPR) - 1 ... 8,192
- Total resolution (TR) -- 1 ... 67,108,864 steps, with $TR = 2^n \times CPR$ -- ($n=0 \dots 13$)
- Limits for the working range
- Cycle Timer for asynchronous PDOs
- 8 programmable cams with HIGH/LOW limits and hysteresis
- General Diagnostic parameters (Offset Value, Alarms, Warnings, version of profile and software)

Manufacturer specific Profile:

- Node commissioning. -- Location and values for Node-ID and Baud rate
- Hysteresis to position change required for Async PDOs with COS mode
- Limits and display format for the speed and acceleration values

PDO Data Mapping

Mapping of up to four data objects to each of the two Transmit PDOs. The resulting data length within one PDO is limited to 8 Byte.

(1) Object 1/Pos Val ¹⁾	I-1
(n) Object 2 ... Object 4	I-1 to I-7

Input Data Objects

I-1 Position value [Pos Val]	4 Byte
I-2 Status of cam	1 Byte
I-3 Status of working range	1 Byte
I-4 Alarms	1 Byte
I-5 Warnings	1 Byte
I-6 Speed value	4 Byte
I-7 Acceleration value	4 Byte

Setting: - Address (Node ID)

0 to 63 by Hardware (DIP Switch) or EEPROM

Setting: - Baud rate

10kb, 20kb, 50kb, 125kb, 250kb, 500kb, 1 MB by Hardware (DIP Switch) or EEPROM

Setting: - Bus Termination

The DIP-Switch (S2) is used to switch on/off an internal bus termination (ON/OFF). Not used (OFF) in case of using an external termination of the network

Setting: - PRESET Value

The Preset function supports adaptation of the encoder zero point to the mechanical zero point of the encoder system. The factory PRESET value is zero [0]

The adjustment is carried out in 2 ways:

- by Hardware (PRESET push button)
- by Software (CANopen Protocol)

Equipment Configuration

Configuring parameters of the encoder can be achieved by a configuration tool in conjunction with an EDS file (Electronic Data Sheet). It contains all the characteristics of the encoder.

¹⁾ Setting cannot be changed

- Linear path measurement using a wire draw mechanism
- High resolution
- Easy to mount
- High-precision measurement drum
- Extremely stable spring return
- Highly flexible steel wire
- Dirt remover made of steel

Absolute encoders: determining the matching number of steps of the encoder for the required linear resolution

$$\text{No. of encoder steps per revolution} = \frac{3.1416 \times (\text{drum diameter} + \text{wire diameter})}{\text{Linear resolution per measuring step}}$$

Example: required linear resolution 0.05 mm; wire draw mechanism 5 m

$$\text{No. of encoder steps per revolution} = \frac{3.1416 \times (105 \text{ mm} + 1.35 \text{ mm})}{0.05 \text{ mm}} = 6682$$

Incremental encoders: determining the matching number of pulses of the encoder for the required linear resolution

$$\text{No. of encoder pulses per revolution} = \frac{3.1416 \times (\text{drum diameter} + \text{wire diameter})}{4 \times \text{Linear resolution per measuring step}} \quad 1$$

Example: required linear resolution 0.025 mm; wire draw mechanism 2 m

$$\text{No. of encoder pulses per revolution} = \frac{3.1416 \times (62.31 \text{ mm} + 1.35 \text{ mm})}{4 \times 0.025 \text{ mm}} = 2000$$

¹ Based on the control/counter evaluating the flanks of the A+B pulses.
